## Backend Lead Developer

**Location:** Vienna (2-3 home office days possible, but based in Vienna)

**About us:** We were recently rewarded to be the most interesting Austrian scale-up, after successfully closing our \$10m A- round

**Values:** Forward-thinking, open-minded, ambitious, responsible

**Helu empowers business leaders to take the right strategic decisions via modern financial management**  
Our mission is to help companies plan, forecast and analyze all their data in one place.

Our headquarters are based in Vienna, Austria. We're a team of experienced, international professionals who are looking for talented, ambitious and experienced people who want to build a company long term.

Helu is founded by a successful serial-entrepreneur and backed by numerous unicorn founders and renowned investors (Wefox, Atlantic Labs, Commerzventures)

### Job description

We are looking for a hands on backend tech lead who will lead the team of highly skillful Python developers, and who will take on the planning of the architecture and the development challenges when scaling to thousands of customers. You will be working with fine-grained service architecture deployed on the AWS cloud.

You will be responsible for implementing and concepting long-term scalable architecture. You are hands on and care about being proud of the code your team produces. You are very technical, have a deep understanding of the Python ecosystem and general software engineering practices. You are always on top of next technical developments in the market, have a strong experience in building B2B SaaS softwares and love our domain (financial and non-financial data management). You have many years of experience with Python and love its granularities and possibilities. Building the vision and architecture of an international Fintech on Python is what

would give you a personal kick. The position focuses more on tech leadership rather than people management.

### Responsibilities

- Design, build and maintain efficient, reusable, and reliable architectural concepts
- Lead technical quality of our backend systems
- Lead our backend team towards technical excellence
- Become an expert in our domain and a go to guy in the team for all technical questions in the back-end
- Support BE engineers in their tasks and their development
- Help maintain code quality, organization and automation
- Work in an agile environment with cross-disciplinary teams to deliver value

### Skills

- A start-up mindset and adherence to classic lean start-up principles
- Deep understanding of Python and its nuances
- Solid experience with design and building advanced systems with Python
- Experience with different data storage types and services (SQL and NoSQL)
- Cloud services experience (preferably AWS).
- Strong understanding of general good software engineering practices
- A knack for writing clean, readable, scalable code
- A good business sense and understanding of our customer needs
- Understanding of fundamental design principles behind a scalable application
- Several years of proven tech lead/architect experience
- Understanding of modern DevOps best practice for distributed apps: CI/CD, containers, serverless deployment, microservices, MQ, etc.

### Would be a strong plus

- Experience working with cloud automation

# Modernes Finanzmanagement. In wenigen Klicks.

- Experience with GraphQL
- Experience with financial reporting/analytics system
- Big data projects

## You can expect...

- Being a part of a highly motivated international team of smart seniors
- Flexible working hours and lots of responsibility
- A workplace in the heart of Vienna or remote options with quarterly office weeks in Vienna
